Introduction

The project aims to streamline processes in our new database management system, ensuring smooth operations for our travel agency, considering various obstacles and difficulties due to various countries, airlines, packages, bookings, and reservations.

An illustration on the left side of the slide featuring a large red sun in the top left, two blue birds in flight, and an open blue map with an orange location pin. The map is resting on a yellow surface, and there are red rectangular blocks and a blue vertical line to the left of the map.

About Us !

A friend group created a travel agency after encountering issues with a UK agency. After franchising a Bahraini agency, they prioritize quick responses, accurate data, security, technology advancements, and customizable dashboards.

Problem Description

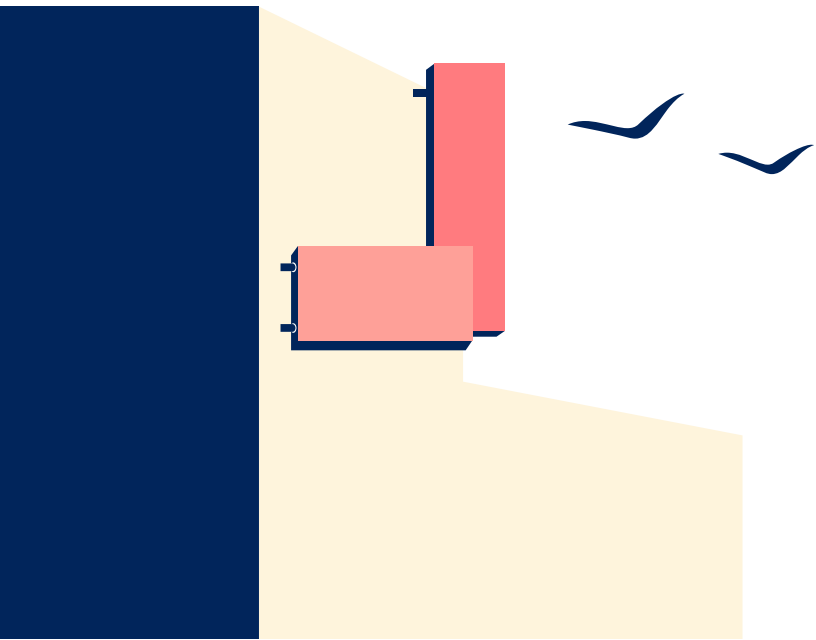

A travel agency can adapt its concept to fit the travel industry by having multiple locations or franchises, offering various travel packages, and handling a maximum number of clients. Clients can choose their preferred package, pay for services, and opt for subscription-based services or loyalty programs.

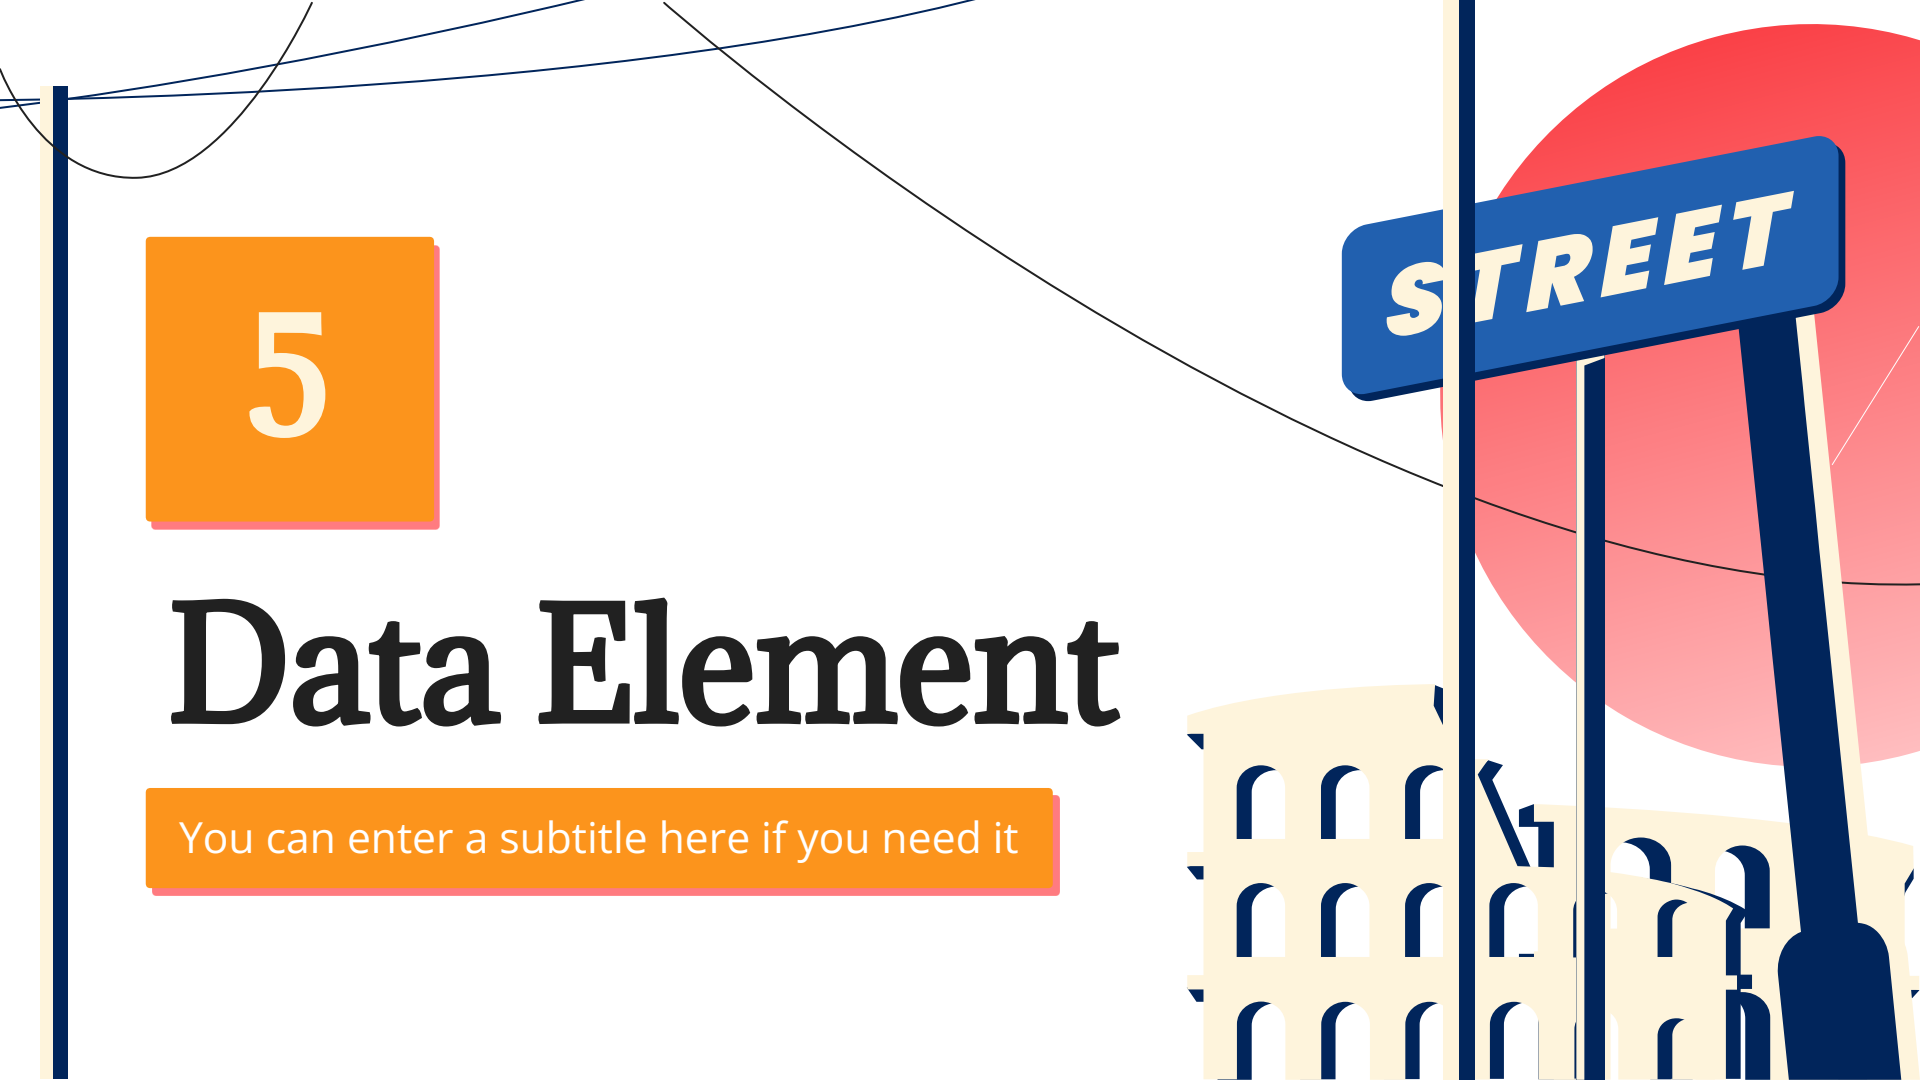

User Requirement

- Our database system offers various packages for diverse groups, including private, public, and honeymoon memberships.
- Customers can customize their own packages with activities.
- We also provide health insurance, visas, and economy and first-class flight reservations to ensure safe and easy travel.

Normalization

Conclusion

A comprehensive database management system was developed for our travel agency, encompassing bookings, transportation rentals, and flight details, ensuring a seamless and hassle-free trip for our customers.
